

Why implement eMARs?

Long-term care facilities are facing increasing challenges in delivering quality care while managing complex medication regimens for their residents. The utilization of LTC MedEx Direct's personalized electronic Medication Administration Records (eMAR) presents an innovative and efficient solution to streamline medication management processes, reduce errors, and ultimately improve resident outcomes.

eMAR Benefits:

- Gives facility managers/owners remote oversight of med pass and staff compliance.
- Simplifies the process with only a click or scan to pass each medication.
- Provides secure login for tracking and auditing purposes to individual users.
- Reminds staff of medication administration and other important treatments.
- Encourages check-ins and monthly order verification at the facility.

The image displays the eMAR system interface across multiple devices. On the laptop, the 'Finder' page shows a list of residents: Adams, Aloha; Adam, Jackson; and John, Doe. A compliance rate of 20% is shown. The tablet displays the 'NextMar' interface with a 20% compliance rate. The smartphone shows the 'Daily Med Compliance' screen with an 85% compliance rate. The desktop view shows a medication administration record for Jane Smith, including her name, gender, location, and a list of medications with instructions and a 'CLICK OR SCAN TO PASS MED' button.
